

Technology Training

Adaptive learning involves more than simply streamlining assignments and the grading process. Data-driven classrooms open up the experience of what students learn, when they learn it and at what level. When teachers use data to drive their decisions and plans, they can respond to problems more effectively, construct new teaching methods, and advance skill sets faster. For this, Arya Consultancy provides continuous technical support and the required technology training's to students and teachers at school premises. Through our product, we are able to provide a set of reports for schools along with the usage metrics per student per subject. These reports give a clear picture of not only the usage of the product in each school, but also indicates the learning level of each student in all the subjects. This helps the teachers in planning their sessions well and focus on both good and academically weak students in a well - planned manner.
